

MORTGAGE DIGITAL TRANSFORMATION

LET ME HELP YOU REACH THE PEAK

Vendor Selection

Finding the right tech partner for your digital transformation effort is crucial. I can take you and your team through the process of narrowing down and choosing the right partner. I take on the burden of the vendor interaction, coordination, requirements gathering, RFP development & scoring, demos and help you build the business case for your chosen vendor.

Implementation

Selecting a vendor is not the destination. Process changes, platform(s) implementation, change management, training, etc. should all be on your roadmap and must align with your overall strategy. While your vendor can help with some of that, I can provide you with the expertise to ensure that the implementation meets your needs and goals.

Strategic Planning

Even if you can't transform everything right now, you need to know what the desired end state is and what you hope to accomplish. Having a documented and agreed on strategy and high level milestones is crucial to ensuring each step along the way moves you towards your goals.

Current State Assessment

Any digital transformation effort starts with a current state assessment. Whether you have already started down the path or don't know how to get started, I can help you assess your current readiness and figure out what's next.

For years I've been helping companies move their paper processes down the digital road. I'm confident I can do the same for you.
